

Universal Cable Stands

For over 25 years, Mine Cable Services Corporation (MCS) has manufactured its line of Universal Cable Stands to support and identify electrical cables in operations where draglines, shovels, drills, and other equipment are in use.

The MCS Universal Cable Stand provides a light weight, reflective marker to identify different runs of cable in operation, helping to avoid undue damage and operational downtime, day or night.

Product Features:

- Available in 30" and 20" tall models
- 30" tall model provides option for placement over top of cable in position
- Reflective striping provides high visibility
- Convenient hand holes for easy handling
- Available in standard colors of orange and yellow. Custom colors available by request

The octagonal shape of the Universal Cable Stands provides sturdy and rugged support for electrical cables on site, while the 30" tall model allows for the option of being placed over electrical cable already in position.
