## Universal Cable Stands

### Universal Cable Stands

Mine Cable Services, for 15 years, has manufactured our line of Universal Cable Stands to support and identify trailing cable when used with draglines, shovels, drills, pumps, and other mining equipment. The octagonal shape of the stand make them very sturdy, and are also rugged, long lasting, light and colourful. Available in either a 20" or 30" tall model, each cable stand is designed to accommodate cable up to 4" diameter, has highly visible reflective markings, has convenient handling holes, and are available in standard colours of orange or yellow. Custom colours and company identification are available upon request, and are highly recommended to mark different runs of cable of different voltages, or cables going to different locations.

Effective February 1, 2014 Mine Cable Services has introduced in our 30" tall model in a new design with the added feature of the cable stand being placed OVER the cable, while maintaining the option of having the cable cradled in the top channel.
